

COLORED INSULATION SPECTRA-GRID™

Alternating colors in different grid sections is a great way to incorporate school or corporate colors.

Please note that colors may vary from images shown here, and are also affected by sheet color and other factors. Consult our Sales Team for details.

UNIQUE & COLORFUL DESIGN OPTIONS

DON'T SETTLE FOR BORING DAYLIGHTING SYSTEMS - INJECT A DOSE OF COLOR!

Color can be transformative to a space, as it can produce a calming effect, reinforce other design elements within the building, or add a bit of "fun" and visual interest into the space. Major offers a great way to inject color into your daylighting system with Spectra-Grid™ colored insulation for our Guardian 275® translucent panel daylighting systems.

By adding color to our translucent insulation, we're able to offer you wide variety of eye-catching options, whether you're looking to create dynamic visual impact with a wide range of bright hues or need a more subtle and restrained look. It's the perfect low-cost color solution for churches needing a stained glass look, restaurants or retail outlets that want to add logo colors, or education facilities looking to incorporate school colors in a unique way. When the sun shines through the panels, the colors "glow" and become more intense. And during evening hours, the panels can be backlit to project color to the exterior, which can be a great way to announce a building's entryway.

No matter what look or mood you want to create for your space, Spectra-Grid™, with its limitless color options, offers a visually interesting and cost-effective design solution.

COLORED INSULATION SPECTRA-GRID™

Spectra-Grid™ systems are available in a wide variety of colors and patterns, and are limited only by your imagination. From standard options (shown at right) that can brighten up any area from a pre-school to an office, to custom-matched colors that coordinate with logos, school colors or other design elements, we'll work with you to find the right solution to fit your project. And don't forget that you can get creative with your design - whether you're utilizing the grid pattern of Guardian 275® panels to simulate stained glass, adding color to the whole system for dramatic impact, or using the grid shapes to form a design!

When choosing the right daylighting system for your next project, however, there's more to consider than color. Major's Guardian 275® translucent panel systems feature high-performance gasketing, integral moisture management, and advanced technology like our Ultimate Series™ fiberglass face sheets - all backed by industry-leading warranties.

No matter what color options you choose, Guardian 275® skylights, canopies and wall systems offer excellent performance and versatility, and are available in a number of specialty configurations including blast and hurricane protection, removable systems, unitized and pre-assembled options to save time and labor costs, and mixed glazed systems that incorporate fixed or operable windows. Contact our Sales Team today for more information at sales@majorskylights.com or 888-758-2678.

WHY MAJOR IS THE RIGHT CHOICE FOR YOUR DAYLIGHTING NEEDS

Major's full line of skylights, canopies and translucent wall systems can benefit both building occupants and the bottom line:

- Translucent panel systems offer glare-free natural light without hot-spots
- Insulation options available for enhanced thermal performance
- Guardian 275® and Clima-Tite™ wall systems can be configured with fixed or operable windows
- Unitized and pre-assembled options available - save \$\$ and time on-site
- TAP (Translucent Adapter Panel) systems allow for easy retrofit into existing 1" curtainwall framing
- Clima-Tite™ systems offer the benefit of pultruded fiberglass support members for enhanced thermal performance and corrosion resistance
- Field-tested strength, color-retention and durability - all backed by industry-best warranties
- Integrated moisture management systems are standard on most systems
- LEED® credit opportunities
- Incorporating daylight provides health benefits like improved mood and productivity, as well as energy savings and reduced HVAC loads
